

## Why Do You Need To Chelate

### HOW TO RECONDITION YOUR BODY AND FEEL BETTER WITH CHELATION THERAPY

First, let's go over some facts.....

Your body is similar to an automobile. Both start out new and wear out as time goes by. Even when a car is new, it won't run well if you put bad gas in it.

If an older car gets good gas, it may still not run well unless it gets a "tune up". One big difference between cars and people, however, is that your body is constantly rebuilding itself – every single second that you are alive!

When you are young, most of your energy is spent growing. You reach full growth at approximately 15 to 18 years of age. From then on, it's all downhill – slowly at first, then faster as we get older. What *should* happen – to be perfect- is that we would stay in excellent health all of our lives –then on morning- about age 100 – just not wake up. There are many reasons why we don't reach "old age".

1. The air we breathe isn't pure anymore.
2. The water we drink isn't pure anymore.  
Chemicals, harmful minerals, pollution, too much acid.
3. The food we eat isn't full of good nutrition like it used to be.  
For instance, a green tomato is gassed and turns red. We then buy it and eat it!
4. Pesticides and chemicals are used everywhere.
5. Toxic metals are everywhere, putting a constant strain on our cells, the smallest working parts in the body.  
Lead: gasoline, paint, batteries, food  
Mercury: amalgam fillings, fish, paint  
Arsenic: old residues from crop sprays, water sources  
Cadmium: cigarettes, tires, plating on metals  
Aluminum: cooking ware, aluminum foil, antacids

**Remember, your body is constantly rebuilding every second of every day!**

For example, tomorrow morning you will be 50,000,000 (50 million) skin cells different than you are today. The lining of your gut (intestines) is changed about every 10 days.

Even red blood cells only live 120 days (4 months). Then they wear out and are replaced by new ones. One teaspoonful of blood = 25 billion red blood cells. Your body has between 5 to 6 quarts of blood totally.

If the body doesn't have the right nutrition, or is polluted, then the next generation of red blood cells won't be as good as they could be, or as good as you need them to be. When you haven't had proper nutrition for years, each poor red blood cell is "dragging", and isn't able to do its job as well as it should, so you begin to suffer and break down without even knowing it!

When this slow degeneration happens to all the cells of your body, you can easily see why you don't have the energy you expect to have, you don't repair as well as you used to, and you get older too quickly – you wear out much faster than you want to. When this abnormal repair process affects your blood vessels, they wear out faster too, leading to circulation problems. Then your body develops more worrisome symptoms: Tiredness, pain, angina (heart pain), stroke, gangrene, poor sleep, digestive issues.....

You just cannot do what you used to be able to do. You do not feel well.  
Your get-up-and-go.....Has got-up-and-GONE!

So...to help your body repair itself with better cells, you need to ask yourself – “how can I give my body better gas?”

**Use better raw materials** – a more wholesome diet, vitamins, and minerals

**Heal your stomach** – Get rid of burping and uncomfortable gas, absorb the foods you eat.

**Avoid pollution** - including cigarettes, alcohol, even medications that can poison your system

**You need a human “tune up”** which is done by using a man-made amino acid called EDTA (Ethylenediamine Tetraacetic Acid). This medication is certified by the FDA for use in lead poisoning.

EDTA – removes harmful minerals such as: lead, arsenic, aluminum, cadmium, and nickel from the body.

EDTA – removes calcium (needed for healthy bones and teeth) from soft tissues, blood vessel walls, joint spaces and eyes (cataracts) while helping the bones grow stronger.

EDTA – reduces iron and copper in the blood which are known to stimulate “free radical” damage leading to harmful inflammation.

EDTA – helps to reverse plaque buildup in arteries.

EDTA- makes platelets more slippery and improves circulation.

Now it is easy to see the benefits from human body reconditioning and rebuilding. This tune- up gives you:

1. A cleaner body (on the inside) – by treatment with EDTA.
2. Better raw materials for better cells – a healthy diet/vitamins and minerals.
3. Less pollution to the body – no cigarettes – less alcohol – less medication.
4. Better digestion – by helping your stomach and intestines to work properly.

**This makes a totally better body because you rebuild gradually with better materials.**

**The process of using EDTA is called “Chelation Therapy”.**

There are many other chelating medications for specific disease conditions, but worldwide experience for over 40 years has shown EDTA works best for circulation problems and hardening of the arteries. EDTA also helps people with degenerative diseases such as diabetes and arthritis. It also helps eliminate or reduce many harmful minerals that affect the cells of your body – a lot of good reasons to use EDTA.

EDTA must be given in the vein, IV, to be effective in your tune-up. It travels in the blood through your entire body and is passed out through the kidneys within 24 hours. It causes many changes to occur in the body as it passes through. These changes are what makes EDTA effective!

As an example, as EDTA removes calcium (the hardening agent) from the blood vessel walls, it literally is reversing “*hardening of the arteries*”!!!

Chelation Therapy with EDTA can improve the way you feel. It helps to restore lost energy and helps you feel younger. Specialists in Chelation Therapy believe it helps you to do the things you want to do, for a longer time than you could otherwise.
